# FACTORY-MADE WROUGHT BUTTWELDING FITTINGS

ASME B16.9-2001

Date of Issuance: June 22, 2001

This Standard will be revised when the Society approves the issuance of a new edition. There will be no addenda issued to this edition. The next edition of this Standard is scheduled for publication in 2005.

ASME will issue written replies to inquiries concerning interpretation of technical aspects of this Standard.

ASME is the registered trademark of The American Society of Mechanical Engineers.

This code or standard was developed under procedures accredited as meeting the criteria for American National Standards. The Standards Committee that approved the code or standard was balanced to assure that individuals from competent and concerned interests have had an opportunity to participate. The proposed code or standard was made available for public review and comment that provides an opportunity for additional public input from industry, academia, regulatory agencies, and the public-at-large.

ASME does not "approve," "rate," or "endorse" any item, construction, proprietary device, or activity.

ASME does not take any position with respect to the validity of any patent rights asserted in connection with any items mentioned in this document, and does not undertake to insure anyone utilizing a standard against liability for infringement of any applicable letters patent, nor assume any such liability. Users of a code or standard are expressly advised that determination of the validity of any such patent rights, and the risk of infringement of such rights, is entirely their own responsibility.

Participation by federal agency representative(s) or person(s) affiliated with industry is not to be interpreted as government or industry endorsement of this code or standard.

ASME accepts responsibility for only those interpretations of this document issued in accordance with the established ASME procedures and policies, which precludes the issuance of interpretations by individuals.

No part of this document may be reproduced in any form,  
in an electronic retrieval system or otherwise,  
without the prior written permission of the publisher.

## **FOREWORD**

In 1921, the American Engineering Standards Committee, later American Standards Association (ASA), organized Sectional Committee B16 to unify and further develop national standards for pipe flanges and fittings (and, later, for valves, gaskets, and valve actuators). Cosponsors of the B16 Committee were the American Society of Mechanical Engineers (ASME), the Heating and Piping Contractors National Association [now the Mechanical Contractors Association of America (MCAA)], and the Manufacturers Standardization Society of the Valve and Fittings Industry (MSS). Cosponsors were later designated as cosecretariat organizations.

Standardization of welding fittings was initiated in 1937 by a subgroup (designated Subgroup 6) of Subcommittee 3. After consideration of several drafts, a standard was approved by the Committee, cosponsors, and ASA, and published with the designation ASA B16.9-1940.

Revisions were made in 1950 and 1955 to add sizes up to NPS 24 and to complete coverage of fittings in some sizes. These revisions were approved and published as ASA B16.9-1951 and ASA B16.9-1958. With the subgroup now designated Subcommittee 6 (later Subcommittee F), further revisions were begun to clarify the intent of the standard, to add angularity tolerances, and to include fittings of different types (long radius-reducing elbows and crosses) and smaller sizes (NPS  $\frac{1}{4}$  and  $\frac{1}{2}$ ). This revision was published as ASA B16.9-1964 after ASA approval.

After reorganization of ASA, first as the United States of America Standards Institute (USASI), then as the American National Standards Institute (ANSI), with the Sectional Committee being redesignated as an American National Standards Committee, another revision increasing the size range to NPS 48 and revising the text for clarity was approved and published as ANSI B16.9-1971.

In 1975, Subcommittee F began a major revision to bring the standard up to date with current practice and usage. Common fractions were expressed as decimals (but without intending higher precision) and metric dimensional equivalents were added. Provisions for step-wise change of radius for NPS  $\frac{3}{4}$  long radius elbows and 180 deg returns were introduced. Following Standards Committee, cosecretariat, and ANSI approval, the revision was published as ANSI B16.9-1978. It was updated by a corrective addendum, B16.9a-1981, issued in February 1982.

In 1982, American National Standards Committee B16 was reorganized as an ASME Committee operating under procedures accredited by ANSI. In this Edition, the text has been revised and inch dimensions are established as the standard. Following approval by the Standards Committee and ASME, approval as an American National Standard was given by ANSI on November 12, 1986 with the new designation ASME/ANSI B16.9-1986.

In 1991 the Subcommittee reviewed the document and made a number of revisions. Dimensions for short pattern lap joints were also added to this 1993 Edition of the Standard.

In this 2001 Edition, short radius elbows and returns were added which includes all dimensions and tolerances of ASME B16.28-1994. This Edition also provides metric units as an independent but parallel alternative standard to U.S. Customary units and a Quality System Program Annex.

Requests for interpretation or suggestions for revision should be sent to the Secretary, B16 Committee, The American Society of Mechanical Engineers, Three Park Avenue, New York, NY 10016.

This Standard was approved as an American National Standard on April 6, 2001.

## **ASME STANDARDS COMMITTEE B16**

### **Standardization of Valves, Flanges, Fittings, and Gaskets**

(The following is the roster of the Committee at the time of approval of this Standard.)

#### **OFFICERS**

# FACTORY-MADE WROUGHT BUTTWELDING FITTINGS

## 1 SCOPE

### 1.1 General

This Standard covers overall dimensions, tolerances, ratings, testing, and markings for wrought factory-made buttwelding fittings in sizes NPS  $\frac{1}{2}$  through 48 (DN 15 through 1200).

### 1.2 Special Fittings

Fittings may be made to special dimensions, sizes, shapes, and tolerances by agreement between the manufacturer and the purchaser.

### 1.3 Fabricated Fittings

Fabricated laterals and other fittings employing circumferential or intersection welds are considered pipe fabrication, and are not within the scope of this Standard.

### 1.4 Standard Units

The values stated in either metric or U.S. Customary units are to be regarded separately as standard. Within the text, the U.S. Customary units are shown in parentheses. The values stated in each system are not exact equivalents; therefore, each system must be used independently of the other. Combining values from the two systems may result in nonconformance with this Standard.

The designations for pressure rating and size are Class and NPS for both metric and customary dimensioned fittings. The designations PN and DN used in international standards are shown for reference convenience.

### 1.5 References

**1.5.1 Referenced Standards.** Standards and specifications adopted by reference in this Standard are shown in Mandatory Appendix II. It is not considered practical to identify the specific edition of each standard and specification in the individual references. Instead, the specific edition reference is identified in Mandatory Appendix II. A product made in conformance with a prior edition of reference standards and in all other respects conforming to this Standard will be considered to be in conformance.

**1.5.2 Codes and Regulations.** A fitting used under the jurisdiction of the ASME Boiler and Pressure Vessel Code, the ASME Code for Pressure Piping, or a governmental regulation is subject to any limitation of that code or regulation. This includes any maximum temperature limitation, or rule governing the use of a material at low temperature.

### 1.6 Service Conditions

Criteria for selection of fitting types and materials suitable for particular fluid service are not within the scope of this Standard.

### 1.7 Welding

Installation welding requirements are outside the scope of this Standard.

### 1.8 Quality Systems

Nonmandatory requirements relating to the fitting manufacturer's Quality System Program are described in Nonmandatory Appendix A.

### 1.9 Convention

For the purpose of determining conformance with this Standard, the convention for fixing significant digits where limits, maximum or minimum values, are specified shall be rounded off as defined in ASTM E 29. This requires that an observed or calculated value shall be "rounded off" to the nearest unit in the last right-hand digit used in expressing the limit. Decimal value in the last and tolerances do not imply a particular method of measurement.

## 2 PRESSURE RATINGS

### 2.1 Basis of Ratings

The allowable pressure ratings for fittings designed in accordance with this Standard may be calculated as for straight seamless pipe of equivalent material (as shown by comparison of composition and mechanical properties in the respective material specifications) in accordance with the rules established in the applicable

sections of ASME B31, Code for Pressure Piping. For the calculation, applicable data for the pipe size, wall thickness, and material that is equivalent to that of the fitting shall be used. Pipe size, wall thickness (or schedule number), and material identity on the fittings are in lieu of pressure rating markings.

## 2.2 Design of Fittings

The design of fittings shall be established by mathematical analyses (e.g. ASME B16.49 for bends) contained in nationally recognized pressure vessel or piping codes or at the manufacturer's option by proof testing in accordance with section 9 of this Standard. In order to meet design or manufacturing requirements, it is expected that some portion of formed fittings may have to be thicker than the pipe wall with which the fittings is intended to be used. The mathematical analyses, if used, may take into account such thicker sections. Records of mathematical analysis and/or successful proof test data shall be available at the manufacturer's facility for inspection by the purchaser.

## 3 SIZE

NPS, followed by a dimensionless number, is the designation for nominal fitting size. NPS is related to the reference nominal diameter, DN, used in international standards. The relationship is, typically, as follows:

DN	15	20	25	32	40	50	65	80	100
NPS	½	¾	1	1¼	1½	2	2½	3	4

NOTE: For NPS>4, the equivalence is: DN=25 (NPS)

## 4 MARKING

### 4.1 Standard Marking

Each fitting shall be permanently marked to show the following:

- (a) manufacturer's name or trademark.
- (b) material identification, either the ASTM or ASME grade designation.
- (c) schedule number<sup>1</sup> or nominal wall thickness in mm.

<sup>1</sup> Schedule number is a dimensionless number that is widely used as a convenient designation for use in ordering pipe and fittings. It is normally associated with a group of standardized pipe wall thickness. Refer to ASME B36.10 and ASME B36.19 for complete details on pipe schedule numbers.

(d) size — the nominal pipe size (NPS) identification number related to the end connections shall be used.

(e) compliance — see para 4.4 for standard and special fitting marking.

(f) A manufacturer may supplement these mandatory markings with others, including a DN size designation, but confusion with the required marking shall be avoided.

### 4.2 Exceptions

Where the size of the fitting does not permit complete marking, the identification marks may be omitted in reverse of the order presented above.

### 4.3 Depth of Stamping

Where steel stamps are used, care shall be taken so that the marking is not deep enough or sharp enough to cause cracks or to reduce the wall thickness of the fitting below the minimum allowed.

### 4.4 Compliance

**4.4.1 Standard Fittings.** That the fitting was manufactured in conformance with this Standard, including all dimensional requirements, is certified by a prefix "WP" in the material grade designation marking.

**4.4.2 Special Fittings.** That the fitting was manufactured in conformance with this Standard except that dimensional requirements are as agreed between the purchaser and the manufacturer, is certified by a supplementary suffix to the material grade designation marking as follows:

- (a) S9 applies for fittings in accordance with ASTM A 234 and A 403.
- (b) S6 applies for fittings in accordance with ASTM A 420.
- (c) S8 applies for fittings in accordance with ASTM A 815.
- (d) SPLD applies for fittings in accordance with ASTM B 361, B 363, and B 366.

## 5 MATERIAL

Wrought fittings covered by this Standard shall be in accordance with ASTM A 234, A 403, A 420, A 815, B 361, B 363, B 366 or the corresponding standard listed in Section II of the ASME Boiler and Pressure Vessel Code. The term *wrought* denotes fittings made of pipe, tubing, plate, or forgings. Fittings made from block forgings may only be supplied subject

agreement between manufacturer and purchaser. Such fittings need not meet the requirements of section 7.

## 6 FITTINGS DIMENSIONS

### 6.1 General

This Standard provides for a fixed position for the welding ends with reference to either the center line of the fittings or the overall dimensions. Dimensional requirements for these fittings are to be found in Tables 3 through 12 and Tables I1 through I12 of Mandatory Appendix I.

### 6.2 Special Dimensions

**6.2.1 Fatigue Loading.** For applications where fatigue loading is a concern, required minimum dimensions shall be furnished by the purchaser.

**6.2.2 Bore Diameter.** Bore diameters, away from the ends, are not specified. If special flow path requirements are needed, the bore dimensions shall be specified by the purchaser.

**6.2.3 Stub Ends.** Service conditions and joint construction often dictate stub end length requirements. Therefore, the purchaser must specify long or short pattern fitting when ordering. (See General Note (c) in Tables 10 and 19.)

## 7 SURFACE CONTOURS

Where adjacent openings in fittings are not in parallel planes, they shall be joined by a circular arc on the external surfaces. The arc may be terminated in tangents.

## 8 END PREPARATION

Unless otherwise specified, the details of the welding end preparation shall be in accordance with Table 1. Transitions from the welding bevel to outside surface of the fitting and from the root face to the inside surface of the fitting lying within the maximum envelope shown in Fig. 1 are at the manufacturer's option except as covered in Note (5) of Fig. 1 or unless otherwise specifically ordered.

## 9 DESIGN PROOF TEST

### 9.1 Required Tests

Proof tests shall be made as set forth in this Standard when the manufacturer chooses proof testing to qualify the fitting design. Unless otherwise agreed upon between manufacturer and purchaser, the proof test shall be one based on the computed bursting pressure of the fitting and its connecting piping.

### 9.2 Test Assembly

**9.2.1 Representative Components.** Fittings that are representative of production and selected for test shall be identified as to material, grade, and lot, including heat treatment. They shall be inspected for dimensional compliance to this Standard.

**9.2.2 Other Components.** Straight seamless or welded pipe sections whose calculated bursting strength is at least as great as the proof test pressure as calculated in para. 9.3 shall be welded to each end of the fitting to be tested. Any internal misalignment greater than 1.5 mm (0.06 in.) shall be reduced by taper boring at a slope not over 1:3. Length of pipe sections for closures shall be as follows.

(a) Minimum length of pipe shall be one pipe O.D. for NPS 14 (DN 350) and smaller.

(b) Minimum length of pipe shall be one-half pipe O.D. for NPS greater than 14 (DN 350).

### 9.3 Test Procedure

Test fluid shall be water or other liquid used for hydrostatic testing. Hydrostatic pressure shall be applied to the assembly. The test is successful if the assembly withstands, without rupture, 105% of the computed proof test pressure defined below.

$$P = \frac{2St}{D}$$

where

$D$  = specified outside diameter of pipe

$P$  = computed minimum proof test pressure for fitting

$S$  = actual tensile strength of the test fitting, determined on a specimen representative of the test fitting, which shall meet the tensile strength requirements of the applicable material of section 5.

(a) Plain Bevel

(b) Compound Bevel

TABLE 1 WELDING BEVELS AND ROOT FACE

Nominal Wall Thickness, $t$	End Preparation
Less than $x$ [Note (2)]	Cut square or slightly chamfer, at manufacturer's option. (Not illustrated.)
$x$ to 22 (0.88) included	Plain bevel as in sketch (a) above.
More than 22 (0.88)	Compound bevel as in sketch (b) above.

**GENERAL NOTES:**

- (a) Dimensions in parentheses are in inches.  
(b) Other dimensions are in millimeters.

**NOTES:**

- (1) See section 8 and Fig. 1 for transition contours.  
(2)  $x = 5$  (0.19) for carbon steel or ferritic alloy steel and 3 (0.12) for austenitic alloy steel.

$t$  = nominal pipe wall thickness of the pipe that the fitting marking identifies

NOTE: Any dimensionally consistent system of units may be used.

#### 9.4 Applicability of Test Results

It is not necessary to conduct an individual test of fittings with all combinations of sizes, wall thicknesses, and materials. A successful proof test on one representative fitting may represent others to the extent described in this Standard.

**9.4.1 Size Range.** One test fitting may be used to qualify similarly proportioned fittings with a size range from one-half to twice that for the tested fitting. The test of a non-reducing fitting qualifies reducing

fittings of the same pattern. The test of a reducing fitting qualifies reductions to smaller sizes.

**9.4.2 Thickness Range.** One test fitting may be used to qualify similarly proportioned fittings with  $t/D$  ranges from one-half to three times that for the tested fitting.

**9.4.3 Material Grades.** The pressure retaining capacity of a geometrically identical fitting made of various grades of steel will be directly proportional to the tensile properties of the various grades; see para 2.1. Therefore, it is necessary to test only a single material grade in a representative fitting to prove the design of the fitting.

**NOTES:**

- (1) The value of  $t_{min}$  is whichever of the following is applicable:
  - (a) the minimum ordered wall thickness of the pipe;
  - (b) 0.875 times the nominal wall thickness of pipe ordered to a pipe schedule wall thickness that has an undertolerance of 12.5%.
- (2) The maximum thickness at the end of the component is:
  - (a) the greater of [ $t_{min} + 4\text{mm}$  (0.16 in.)] or  $1.15t_{min}$  when ordered on a minimum wall basis;
  - (b) the greater of [ $t_{min} + 4\text{mm}$  (0.16 in.)] or  $1.10t_{nom}$  when ordered on a nominal wall basis.
- (3) Weld bevel shown is for illustration only.
- (4) The weld reinforcement permitted by applicable code may lie outside the maximum envelope.
- (5) Where transitions using maximum slope do not intersect outside surface within the transition region, as shown by phantom outline, maximum slopes shown shall be used. Alternately, radii lying within the envelope may be used.

**FIG. 1 MAXIMUM ENVELOPE FOR WELDING END TRANSITIONS****10 PRODUCTION TESTS**

Hydrostatic testing of wrought fittings is not required by this Standard. All fittings shall be capable of withstanding, without leakage or impairment of serviceability, a hydrostatic test pressure required by the applicable piping code for seamless pipe of material equivalent to the fitting material and of the size and wall thickness the fitting marking identifies.

**11 TOLERANCES**

Tolerances for fittings are shown in Tables 2 and II, and apply to the nominal dimensions given in Tables 3 through 12 and Tables I2 through II1. Where given in the tables, the minimum and maximum dimensions are based on these tolerances. The listings with decimals do not imply precision measurement such as use of vernier, micrometer, electronic readout equipment, etc.

TABLE 2 ILLUSTRATION

TABLE 2 TOLERANCES

Nominal Pipe Size (NPS)	(DN)	All Fittings			Center-to-End Dimensions of 90 Deg and 45 Deg Elbows and Tees, A, B, C, M			180 Deg Returns		
		Outside Diameter at Bevel, D [Notes (1), and (2)]	Inside Diameter at End [Notes (1)/(3), and (4)]	Wall Thickness, t [Note (3)]	Lap Joint Stub Ends, F, H	Overall Length of Reducers and Lap Joint Stub Ends,	Caps, E	Center- to- Center Dimension, O	Dimension, K	Back- to- Face Alignment of Ends, U
1/2 to 2 1/2	15-65	+1.6-0.8	0.8		2	2	3	6	6	1
3 to 3 1/2	80-90	+1.6	1.6	Not Less Than	2	2	3	6	6	1

37 to 48	800-1200	+6.4-4.8	4.8		5	5	10	...	...	...
<b>Lap Joint Stub Ends</b>										
Nominal Pipe Size (NPS)	(DN)	Outside Diameter of Lap, G	Fillet Radius of Lap, R	Outside Diameter of Barrel	Lap Thickness	Nominal Pipe Size (NPS)	(DN)	Off Angle, Q	Off Plane, P	Angularity Tolerances
1/2 to 2 1/2	15-65	+0-1	+0-1	+1.6-0	1/2 to 4	15-100	1	1	2	
3 to 3 1/2	80-900	+0-1	+0-1	See Table 10 For Limiting Dimensions	5 to 8	125-200	2	2	4	
4	100	+0-1	+0-2	+1.6-0	10 to 12	250-300	2	2	5	
5 to 8	125-200	+0-1	+0-2	+1.6-0	14 to 16	350-400	3	3	6	
10 to 18	250-450	+0-2	+0-2	+3.2-0	18 to 24	450-500	4	4	10	
20 to 24	500-600	+0-2	...	+3.2-0	26 to 30	650-750	5	5	10	
26 to 30	650-750	...	...	...	32 to 42	800-1050	5	5	13	
37 to 48	800-1200	...	...	...	44-48	1100-1200	5	5	19	

## GENERAL NOTES:

- (a) For reference, see Table 2 Illustration beginning on page 6.
- (b) All dimensions are in millimeters.
- (c) Tolerances are equal plus and minus except as noted.

## NOTES:

- (1) Out-of-round is the sum of absolute values of plus and minus tolerances.
- (2) This tolerance may not apply in localized areas of formed fittings where increased wall thickness is required to meet design requirements of para. 2.2.
- (3) The inside diameter and the nominal wall thicknesses at ends are to be specified by the purchaser.
- (4) Unless otherwise specified by the purchaser, these tolerances apply to the nominal inside diameter, which equals the difference between the nominal outside diameter and twice the nominal wall thickness.

**TABLE 3 DIMENSIONS OF LONG RADIUS ELBOWS**

Nominal Pipe Size (NPS)	DN	Outside Diameter at Bevel	Center-to-End	
			90 Deg Elbows, A	45 Deg Elbows, B

22	550	559	1676	1118
24	600	610	1829	1219

GENERAL NOTE: All dimensions are in millimeters.

## NOTES:

- (1) See Table 2 for tolerance for alignment of ends U.
- (2) Dimension A is equal to one-half of dimension O.
- (3) O and K dimensions of 57 mm and 43 mm, respectively, may be furnished for NPS 3/4 (DN 20) at the manufacturer's option.

TABLE 6 DIMENSIONS OF SHORT RADIUS ELBOWS

22	550	565	558	305	152	13	641
24	600	616	609	305	152	13	692

**GENERAL NOTES:**

- (a) All dimensions are in millimeters.
- (b) See Table 2 for tolerances.
- (c) Service conditions and joint construction often dictate stub end length requirements. Therefore, the purchaser must specify long or short pattern fitting when ordering.

**NOTES:**

- (1) Gasket face finish shall be in accordance with ASME B16.5 for raised face flanges.
- (2) The lap thickness  $T$  shall not be less than nominal pipe wall thickness. See Table 2 for maximum tolerance.
- (3) When short pattern stub ends are used with larger flanges in Classes 300 and 600, (PN50 & PN110) and with most sizes in Classes 900 (PN150) and higher, and when long pattern stub ends are used with larger flanges in Classes 1500 and 2500, (PN260 AND PN420) it may be necessary to increase the length of the stub ends in order to avoid covering the weld with the flange. Such increases in length shall be a matter of agreement between the manufacturer and purchaser.
- (4) When special facings such as tongue and groove, male and female, etc., are employed, additional lap thickness must be provided and such additional thickness shall be in addition to (not included in) the basic length  $F$ .
- (5) These dimensions conform to the radius established for lap joint flanges in ASME B16.5, Pipe Flanges and Flanged Fittings.
- (6) This dimension conforms to standard machined facings shown in ASME B16.5. The back face of the lap shall be machined to conform to the surface on which it seats. Where ring joint facings are to be applied, use dimension  $K$  as given in ASME B16.5.

## GENERAL NOTES:

- (a) All dimensions are in millimeters.  
 (b) The shape of these caps shall be ellipsoidal and shall conform to the shape requirements as given in the ASME Boiler and Pressure Vessel Code.

## NOTES:

- (1) Length  $E$  applies for thickness not exceeding that given in column "Limiting Wall Thickness for Length  $E$ ".  
 (2) Length  $E_1$  applies for thickness greater than that given in column "Limiting Wall Thickness" for NPS 24 (DN 600) and smaller. For NPS 26 (DN 65) and larger, length  $E_1$  shall be by agreement between manufacturer and purchaser.

Note (1)

GENERAL NOTE: All dimensions are in millimeters.

## NOTE:

- (1) While the figure illustrates a "bell shaped" reducer, the use of conical reducer is not prohibited.

## **MANDATORY APPENDIX I INCH TABLES**

This Appendix provides tables of the standard inch dimensions for fittings.

TABLE II ILLUSTRATION

TABLE I1 TOLERANCES

All Fittings		90 Deg Reducers and 45 Deg Elbows and Tees			Reducers and Lap Joint and Tees Stub Ends			180 Deg Returns			Lap Joint Stub Ends			Angularity Tolerances		
		Inside Diameter at End [Notes (1), (3), and (4)]	Wall Thickness, $t$ [Note (3)] A,B,C,M	Overall Length, $E$ FH	Overall Length of Cap, $F$	Center-to-End Dimension, $K$	Center-to-Center Dimension, $O$	Center-to-Face Dimension of Ends, $U$	Back-to-Face Alignment of Ends, $R$	Outside Diameter of Radius, $G$	Fillet Lap, $R$	Outside Diameter of Barrel, $T$	Lap Thickness, $\Delta$	Nominal Pipe Size (NPS)	Off Angle, $Q$	Off Plane, $P$

## GENERAL NOTES:

- (a) For reference, see Table I1 Illustration beginning on page 22.  
 (b) All dimensions are in inches. Tolerances are equal plus and minus except as noted.

## NOTES:

- (1) Out-of-round is the sum of absolute values of plus and minus tolerance.  
 (2) This tolerance may not apply in localized areas of formed fittings where increased wall thickness is required to meet design requirements of para. 2.2.  
 (3) The inside diameter and the nominal wall thicknesses at ends are to be specified by the purchaser.  
 (4) Unless otherwise specified by the purchaser, these tolerances apply to the nominal inside diameter, which equals the difference between the nominal outside diameter and twice the nominal wall thickness.

22	22.00	66.00	44.00
24	24.00	72.00	48.00

GENERAL NOTE: All dimensions are in inches.

## NOTES:

- (1) See Table I1 for tolerance for alignment of ends, U.
- (2) Dimension A is equal to one-half of dimension O.
- (3) O and K dimensions of 2.25 in. and 1.69 in. respectively, may be furnished for NPS  $\frac{3}{4}$  at the manufacturer's option.

TABLE I5 DIMENSIONS OF SHORT RADIUS ELBOWS

Nominal Pipe Size	Outside Diameter at Bevel	Center-to-End, A
1	1.32	1.00
$1\frac{1}{4}$	1.66	1.25
$1\frac{1}{2}$	1.90	1.50
2	2.38	2.00

22	22.240	21.969	12.00	6.00	0.50	25.25
24	24.240	23.969	12.00	6.00	0.50	27.25

## GENERAL NOTES:

- (a) All dimensions are in inches.
- (b) See Table I1 for tolerances.
- (c) Service conditions and joint construction often dictate stub end length requirements. Therefore, the purchaser must specify long or short pattern fitting when ordering.

## NOTES:

- (1) Gasket face finish shall be in accordance with ASME B16.5 for raised face flanges.
- (2) The lap thickness  $T$  shall not be less than nominal pipe wall thickness. See Table I1 for tolerance.
- (3) When short pattern stub ends are used with larger flanges in Classes 300 and 600, and with most sizes in Classes 900 and higher, and when long pattern stub ends are used with larger flanges in Classes 1500 and 2500, it may be necessary to increase the length of the stub ends in order to avoid covering the weld with the flange. Such increases in length shall be a matter of agreement between the manufacturer and the purchaser.
- (4) When special facings such as tongue and groove, male and female, etc., are employed, additional lap thickness must be provided and such additional thickness shall be in addition to (not included in) the basic length  $F$ .
- (5) These dimensions conform to the radius established for lap joint flanges in ASME B16.5, Pipe Flanges and Flanged Fittings.
- (6) This dimension conforms to standard machine facings shown in ASME B16.5. The back face of the lap shall be machined to conform to the surface on which it seats. Where ring joint facings are to be applied, use dimension  $K$  as given in ASME B16.5.

16	16.00	7.00	0.50	8.00					

## GENERAL NOTES:

- (a) All dimensions are in inches.
- (b) The shape of these caps shall be ellipsoidal and shall conform to the shape requirements as given in the ASME Boiler and Pressure Vessel Code.

## NOTES:

- (1) Length *E* applies for thickness not exceeding that given in column "Limiting Wall Thickness for Length *E*."
- (2) Length *E*<sub>1</sub> applies for thickness greater than that given in column "Limiting Wall Thickness" for NPS 24 and smaller. For NPS 26 and larger, length *E*<sub>1</sub> shall be by agreement between the manufacturer and purchaser.

## GENERAL NOTES:

(a) All dimensions are in inches.

## NOTE:

(1) While the figure illustrates a "bell shaped" reducer, the use of conical reducer is not prohibited.

## MANDATORY APPENDIX II REFERENCES

The following is a list of standards and specifications referenced in this Standard showing the year of approval.

ASME B16.5-1996, Pipe Flanges and Flanged Fittings

ASME B16.25-1997, Butt welding Ends

ASME B16.49-2000, Factory-Made Wrought Steel Butt-welding Induction Bends for Transportation and Distribution Systems

ASME B31, Code for Pressure Piping

ASME B36.10M-1996, Welded and Seamless Wrought Steel Pipes

ASME B36.19M-1985(R1994), Stainless Steel Pipe

ASME BPVC-1995, ASME Boiler and Pressure Vessel Code

Publisher: American Society of Mechanical Engineers (ASME International), Three Park Avenue, New York, NY 10016; Order Department: 22 Law Drive, Box 2300, Fairfield, NJ 07007

ASTM A 234-00, Standard Specification for Piping Fittings of Wrought Carbon Steel and Alloy Steel for Moderate and High Temperature Service

ASTM A 403-00b, Standard Specification for Wrought Austenitic Stainless Steel Piping Fittings

ASTM A 420-00a, Standard Specification for Piping Fittings of Wrought Carbon Steel and Alloy Steel for Low-Temperature Service

ASTM A 815/A 815M-00, Standard Specification for Wrought Ferritic, Ferritic/Austenitic and Martensitic Stainless Steel Piping Fittings

ASTM B 361-95, Standard Specification for Factory-Made Wrought Aluminum and Aluminum-Alloy Welding Fittings

ASTM B 363-00, Standard Specification for Seamless and Welded Unalloyed Titanium and Titanium Alloy Welding Fittings

ASTM B 366-00, Standard Specifications for Factory-Made Wrought Nickel and Nickel Alloy Fittings

ASTM E 29-93a, Standard Practice for Using Significant Digits in Test Data to Determine Conformance With Specifications

Publisher: American Society for Testing and Materials (ASTM), 100 Barr Harbor Drive, West Conshohocken, PA 19428

## NONMANDATORY APPENDIX A QUALITY SYSTEM PROGRAM

The products manufactured in accordance with this Standard shall be produced under a quality system program following the principles of an appropriate standard from the ISO 9000 series<sup>1</sup>. A determination of the need for registration and/or certification of the product manufacturer's quality system by an independent organization shall be the responsibility of the manufacturer. The detailed documentation demonstrating program compliance shall be available to the purchaser at the manufacturer's facility. A written summary description of the program utilized by the product manufacturer shall be available to the purchaser upon request. The product manufacturer is defined as the entity whose name or trademark appears on the product in accordance with the marking or identification requirements of this Standard.

---

<sup>1</sup> The series is also available from the American National Standards Institute (ANSI) and the American Society for Quality Control (ASQC) as American National Standards that are identified by a prefix "Q" replacing the prefix "ISO". Each standard of the series is listed under references.

ASME-B16.9

## ADOPTION NOTICE

ASME-B16.9, "Fittings, Steel Butt welding, Factory-Made Wrought," was adopted on October 3, 1994 for use by the Department of Defense (DoD). Proposed changes by DoD activities must be submitted to the DoD Adopting Activity: Commanding Officer, Naval Construction Battalion Center, Code 156, 1000 23rd Avenue, Port Hueneme, CA 93043-4301. DoD activities may obtain copies of this standard from the Standardization Document Order Desk, 700 Robbins Avenue, Building 4D, Philadelphia, PA 19111-5094. The private sector and other Government agencies may purchase copies from the American Society of Mechanical Engineers, 345 East 47th Street, New York, NY 10017.
